

# BIG TIME ILLUMINATOR

Thank you for choosing this fine product from GRIOT'S GARAGE. The BIG TIME ILLUMINATOR gives you hands-free lighting of the entire engine compartment. It's simple to operate and can be used for interior detailing. Enjoy the best.

## USEFUL INSTRUCTIONS

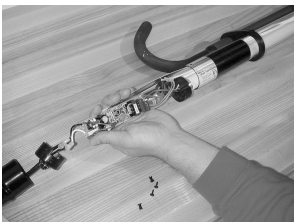

The on/off switch is located under the rubber end cap next to the power cord. Simply push down on the raised bump in the end cap to turn the light on or off. The overall width of the BIG TIME ILLUMINATOR is 48 1/2". The spring-loaded extension bar allows you to place the light on any open hood. The BIG TIME ILLUMINATOR will not work with hoods that are narrower than 46". The fluorescent tube can be rotated to help direct light where you need it. To attach the BIG TIME ILLUMINATOR, place one of the soft rubber-coated hooks over the side of the hood. Extend the other hook and place it over the opposite side of the hood. You may use the BIG TIME ILLUMINATOR inside the passenger compartment by placing the hooks on the roof area above the side windows. To do so, place one hook onto the roof and extend the other hook over the opposite side of the roof. For added protection, you can place a clean cloth between the hook and the roof. This allows bright light for detailing your interior or working on your dash. For side windows with framework around the glass, it's best to have the doors open before installing the BIG TIME ILLUMINATOR.

## BULB REPLACEMENT

The BIG TIME ILLUMINATOR uses a 25-watt cool running fluorescent bulb. To replace the bulb, you must first remove the rubber end cap located on the power cord side of the clear lens housing (see picture A). Carefully twist and pull the rubber cap until it's free. Next, remove the pair of two-piece plastic rivets securing the switch assembly to the clear lens housing. Carefully pry up under the head of the pin with a small standard screwdriver and set the pin aside (see picture B). Next pry up under the rivet insert and set it aside (see picture C). Slide the switch along with the circuit board and fluorescent bulb from the clear lens housing, being careful not to damage the circuit board. To exchange the bulb, remove the round black connectors at the two ends of the fluorescent tube (see picture D). Once the bulb has been replaced, carefully slide the assembly back into the clear lens housing – making sure the reflector stays in place. Secure the switch housing with the two-piece plastic rivets. Place the rubber end cap over the switch and clear lens housing while making sure to align the raised bump in the end cap with the on/off switch (see picture E).

## DISCLAIMER

GRIOT'S GARAGE is not responsible for the misuse of the BIG TIME ILLUMINATOR or for any injury or damage incurred to any person or object related to the BIG TIME ILLUMINATOR.
