

## AUTO RETRACTING AIR HOSE REEL

Thank you for choosing this fine product from GRIOT'S GARAGE. The **AUTO RETRACTING AIR HOSE REEL** is intended to help deliver compressed air to points all around the garage. The mounting bracket swivels up to 180 degrees for easy maneuvering. A self-layering mechanism helps to rewind the hose evenly onto the reel. The  $\frac{3}{8}$ " ID high quality, kink resistant PVC hose can withstand pressures up to 250 PSI. Enjoy the best.

### USEFUL INFORMATION

The **AUTO RETRACTING AIR HOSE REEL** should be installed within three feet of your air compressor. This will allow the use of the inlet hose supplied with the hose reel. Attach the inlet hose to the reel by installing the male brass fitting from the hose into the female brass fitting located on the side of the hose reel. Connect the other end of the inlet hose to your air compressor. In order to avoid leakage, Teflon tape should be used on all threaded connections. Do not over tighten the brass fittings.

The mounting bracket can be installed to a wood, brick or masonry wall. The unit can be mounted in many different positions. The most appropriate position is to vertically mount the reel on a wall or post, approximately three feet above the ground. You may also mount the **AUTO RETRACTING AIR HOSE REEL** to an overhead ceiling beam or rafter. If mounting the reel to the ceiling, make sure you secure the bracket pin. The mounting bracket has four holes for use with the supplied 8mm mounting bolts and lock washers. The hole centers measure 132mm ( $5\frac{3}{16}$ " ) and 66mm ( $2\frac{9}{16}$ " ).

### OPERATION

The **AUTO RETRACTING AIR HOSE REEL** is fitted with ratchet wheel and locking mechanism, which makes it easy to extend and retract the hose. When pulling the hose, you can hear a clicking sound from the locking mechanism at certain points on the reel. When you hear the click you can latch the hose in place to maintain your desired length. To retract the hose, pull it out about 15 inches or until you can no longer hear the clicking from the locking mechanism. This will allow the hose to retract back into the housing. During retraction, always hold on to the hose until it is finished. NEVER allow the unit to retract without holding the hose. Doing so can cause injury or damage to the reel. Do not leave the reel outside during very cold temperatures. This will cause the hose to be less flexible and difficult to retract.

### DISCLAIMER

GRIOT'S GARAGE is not responsible for any misuse of **AUTO RETRACTING AIR HOSE REEL** for any injury or damage incurred to any person or object related to **AUTO RETRACTING AIR HOSE REEL**.
