

## DUAL LASER GUIDED PARKING SYSTEM

Thank you for choosing this fine product from GRIOT'S GARAGE. Enjoy the best.

### USEFUL INSTALLATION INSTRUCTIONS

Step 1 – Peel off the green paper on the solar panel base unit. Firmly attach the solar panel base unit to your garage door opener – with the solar panel close to the light source on your garage door opener. The light on your opener powers this base unit.

Step 2 – Extend the cable of the laser holder and plug it in to the solar panel base unit. Peel off the green paper on the laser holder and attach this to the ceiling of your garage above the location of where you park your vehicle(s). I suggest you use the two holes in the holder and screw the unit in to the ceiling using drywall screws or wood screws depending on the ceiling material.

Step 3 – Place your vehicles where you would like them to be parked. Activate the unit by turning on your garage door opener. The light from your garage door opener activates the solar panel base and activates the laser light. Adjust the laser light to a spot on the vehicle(s) where you can see it while sitting in the driver's seat. A good location is somewhere on your dash or hood. This will be the spot you always locate the laser light when you pull in to the garage.

Step 4 – Enjoy perfect parking every time you pull in to your garage.

**WARNING:** Do not look directly in to the laser light as it may cause damage to your eyes. Keep children and pets from looking in to the laser light as well.
