### USEFUL INSTRUCTIONS

**MODULAR FLOOR TILES** must be acclimated to a temperature of 72° F for a period of 24 hours prior to installation. Begin installation by starting at the top left hand corner of the space to be covered. This is typically the inside corner of the garage. An expansion gap of 1/4" (6mm) should be left at the walls and any other obstacle such as beams, cabinets and heavy equipment. Tiles should be installed around heavy equipment, not under them, to allow for expansion and contraction. Set the first tile down, taking care to place the "smooth" edges left and top (wall sides). **(PICTURE A)** Place the next tile to the right of that, "smooth" edges left and top, interlocking the pegs under the second tile with the loops on the edge of the first tile. A tap with the palm of your hand should be sufficient to seat the tile tightly. Continue working towards the right until the first 3 rows are complete. Go back to the left side and install the first 3 rows towards the garage door opening. Now install the edging on the 3 front tiles and close the garage door. The edges should sit behind the closed door. (If the gap between the edge and the door is too large then pull the floor forward to where it should finish and cut-in the tiles to the back of the garage).

**MODULAR FLOOR TILES** and borders can be cut with the use of a wood cutting saw such as a Circular Saw, Jig Saw, Table Saw or even a hand saw for detailed areas. Continue to work from left to right and back to front. Be sure to check the alignment along the top and the left side as you progress. Add edging and corners, if necessary, to finish the installation.

NOTE: In some applications, direct sunlight can cause expansion in the tiles and special installation measures may need to be taken.
